

Case Study:

Walt Disney World
16th Annual EPCOT
International Flower and Garden Festival

Challenge: Needed efficient and elegant way to add flowers to their waterscape

Solution: Added several dozen Floating Treatment Wetlands, custom shaped into circles and stars

Testimonial: *“Headwaters Floating Island manufactured two dozen FTEs in the shape of circles and stars for the 16th annual EPCOT International Flower and Garden Festival at Walt Disney World in Orlando, Florida. Floating Islands were prominently on display at EPCOT in the East and West Lakes along the concourse leading to the World Showcase. The horticulturalists at EPCOT were very happy with the islands and Eric Darden, the festival director, is already thinking ahead and would like to feature floating islands in an even larger capacity next year. Planning and design for the 2010 festival is already underway.”*

Diann Hayes - Partner,
Floating Island Southeast

Applications: Wildlife Habitat

Anglers seeking to improve the health and vitality of a fishing area; conservationists hoping to provide increased protection for fish and fowl; concerned citizens working to maintain ecological balance... anyone interested in restoring or improving habitat for animals and plants in and around water will benefit from BioHavens®.

BioHaven® Floating Islands provide all the necessary elements of habitat from water and cover to forage like plants, seeds, beneficial insects and fish. Our products are a versatile platform that can be made to meet nearly any design requirement, from emergent sand bar habitat to predator protection, shade and forage provided by overhanging banks. Our latest product, the Submerged Treatment Ecosystem can

be adapted to mimic a floating freshwater plant forest by providing ideal spawning and protective cover for fish and beneficial insects.

Applications

- Wetland and riparian habitat
- Submerged freshwater “plant forests” for spawning, forage and protective cover
- Overhanging bank for fish
- Bird nesting, forage and protective cover
- Zoo habitat enhancements for mammals, fish and birds
- Spawning platforms for small forage fish like minnows and chubs
- Waterfowl and songbird attraction
- Emergent sandbar habitat for terns, plovers and other shore birds
